The suspicious cervical cancer's pathways to diagnosis and treatment in Ethiopia

The main objective of this research project is to assess time interval in Cervical cancer (CC) pathways, from suspicious CC to diagnosis and treatment, evaluate how clinical, socio-demographic, and treatment factors affect delays throughout patients' clinical pathways in Ethiopia.

A retrospective study method will be implemented.

This research project will provide information and improve knowledge on pathways from suspicious CC to symptom onset, disease presentation and treatment for effective cervical cancer screening interventions and for early detection and treatment in Ethiopia.

Research task 3.2
