Whole Person Care Model to Improve shared Treatment Decision making on cancer care and the Effect of Socio-Cultural Factors in Ethiopia

I aim at assessing the effectiveness of Whole Person Care (WHP) model to improve cancer care and treatment decision and explore socio-cultural factors. I will use mixed method, both quasi-experimental study and phenomenological explorative qualitative study design will be employed sequentially.

Two population proportion formulas will be used to calculate the sample size.

I expect Whole Person Care to be effective model to improve cancer care and treatment shared decision making.

Research Tasks

- Contextualizing the treatment decision making,
- Designing appropriate guideline,
- Piloting the guideline and observe the impact.
