**A THEORY-BASED
INTERVENTION TO BUILD
THE CAPACITY AMONG
COMMUNITY OPINION
LEADERS TO INCREASE
CERVICAL CANCER
SCREENING UPTAKE IN THE
KILIMANJARO, TANZANIA**

I aim at designing, developing and evaluating a theory-based intervention to build capacity among community opinion leaders to increase cervical cancer screening uptake in Kilimanjaro, Tanzania.

Methods used will include; Quantitative and Qualitative methods to identify gaps on CC screening uptake among community opinion leaders and women, which will then guide in the development of training curriculum.

I expect to conduct a training among religious leaders and local political leaders on cervical cancer screening, thereafter will be expected to conduct a behavioral change interventions in their communities.

Research Task 2.1
